

Progression in methods taught at Mickleover Primary for written calculations

Dear Parents

Please find attached a progression of the methods that your child will encounter in each phase when learning written methods for addition , subtraction, multiplication and division. They have been taken from the school Calculation Policy which can be found in full, on the school website in the 'Parents' section. Please retain your copy for reference but they will also be available on the School Website.

Please find time to look through the methods used, as these will be the methods that your child will be taught in class in this and future years. It can be helpful for parents to ask their child to show them and explain the methods that they are being taught in school. The ability to explain will aid their understanding. Please refrain from supporting your child by teaching other methods which do not form part of our policy.

Please return the slip below indicating that you have received this document and should you require any clarification of the methods being taught please comment below. We are hoping to run workshops in the Autumn Term 2016.

Many thanks

Mrs M. Harrison (KS 2 Maths Coordinator)

Mrs S. Sharpe (KS 1 Maths Coordinator)

I have received a copy of the progression of written calculation methods. _____

I would be interested in attending a workshop on Ks1 ks 2

Addition Subtraction Multiplication Division

Ks2 Copy

Progression in written addition methods

Year 3	Year 4	Year 5	Year 6																																																										
<p>Add numbers with up to three digits, using formal written method of columnar addition</p> <p>Stage 1 no exchange and expanded</p> $\begin{array}{r} 21 \quad 20+1 \\ +17 \quad 10+7 \\ \hline 38 \quad 30+8 \end{array}$ <p>Stage 2 with exchange and expanded</p> $\begin{array}{r} 25 \quad 20+5 \\ +17 \quad 10+7 \\ \hline 42 \quad 30+12=42 \end{array}$ <p>Stage 3 begin to represent as vertical alongside expanded</p> $\begin{array}{r} 67 \quad (60+7) \\ +24 \quad (20+4) \\ \hline 80+11=91 \end{array} \quad \begin{array}{r} +24 \\ 11(7+4) \\ \hline 80(60+20) \\ 91 \end{array}$ <p>Stage 4 more than two numbers recorded vertically</p> $\begin{array}{r} 24 \\ 67 \\ +12 \\ \hline 13(4+7+2) \\ 90(20+60+10) \\ 103(90+13) \end{array}$	<p>Add numbers with up to 4 digits using the formal written methods of columnar addition. Carry below the line and cross off when added into the calculation</p> $\begin{array}{r} 625 \quad 783 \\ +48 \quad +42 \\ \hline 673 \quad 825 \\ \cancel{4} \quad \cancel{4} \end{array}$ $\begin{array}{r} 256 \\ +127 \\ \hline 383 \\ \cancel{1} \end{array}$ $\begin{array}{r} 5209 \\ +3192 \\ \hline 8401 \\ \cancel{1} \quad \cancel{1} \end{array}$	<p>Add whole numbers with more than 4 digits, including using formal methods (columnar)</p> $\begin{array}{r} 23587 \\ +1475 \\ \hline 25062 \\ 50124 \\ \cancel{121} \end{array}$ <table border="1" style="margin: 10px auto; border-collapse: collapse; text-align: center;"> <tr><td>5</td><td>2</td><td>0</td><td>9</td></tr> <tr><td>+</td><td>3</td><td>1</td><td>2</td></tr> <tr><td colspan="4"><hr/></td></tr> <tr><td>8</td><td>4</td><td>0</td><td>1</td></tr> <tr><td colspan="4"><hr/></td></tr> <tr><td></td><td>$\cancel{1}$</td><td>$\cancel{1}$</td><td></td></tr> </table> <p>Begin to add two or more decimal fractions with up to three digits and the same number of decimal places;</p> <table border="1" style="margin: 10px auto; border-collapse: collapse; text-align: center;"> <tr><td>3</td><td>8</td><td>.</td><td>3</td><td>6</td></tr> <tr><td>+</td><td>2</td><td>7</td><td>.</td><td>9</td><td>5</td></tr> <tr><td colspan="6"><hr/></td></tr> <tr><td>6</td><td>6</td><td>.</td><td>3</td><td>1</td></tr> <tr><td colspan="6"><hr/></td></tr> <tr><td>$\cancel{1}$</td><td>$\cancel{1}$</td><td></td><td>$\cancel{1}$</td><td></td><td></td></tr> </table> <p>Know that decimal points should line up under each other, particularly when adding or subtracting mixed amounts, e.g. 3.2 m - 280 cm. when working with decimals, always make each number have the same amount of digits to the right of the decimal point</p> $3.7 + 2.35 = \begin{array}{r} 3.70 \\ +2.35 \\ \hline 6.05 \\ \cancel{1} \end{array}$	5	2	0	9	+	3	1	2	<hr/>				8	4	0	1	<hr/>					$\cancel{1}$	$\cancel{1}$		3	8	.	3	6	+	2	7	.	9	5	<hr/>						6	6	.	3	1	<hr/>						$\cancel{1}$	$\cancel{1}$		$\cancel{1}$			<p>There is an expectation that children will continue to practise and use the formal written method for larger numbers and decimals and use these methods when solving problems, when appropriate (see previous year's guidance for methods).</p>
5	2	0	9																																																										
+	3	1	2																																																										
<hr/>																																																													
8	4	0	1																																																										
<hr/>																																																													
	$\cancel{1}$	$\cancel{1}$																																																											
3	8	.	3	6																																																									
+	2	7	.	9	5																																																								
<hr/>																																																													
6	6	.	3	1																																																									
<hr/>																																																													
$\cancel{1}$	$\cancel{1}$		$\cancel{1}$																																																										
<p>Add fractions with the same denominator within one whole</p> $\frac{5}{7} + \frac{1}{7} = \frac{6}{7}$	<p>Add fractions of the same denominators</p> $\frac{1}{6} + \frac{4}{6} = \frac{5}{6}$	<p>Add fractions with same denominators and multiples of the same number</p> $\frac{1}{6} + \frac{4}{6} = \frac{5}{6}$ $\frac{1}{4} + \frac{1}{8} = \frac{2}{8} + \frac{1}{8} = \frac{3}{8}$	$2\frac{1}{4} + 1\frac{1}{6} = 2\frac{3}{12} + 1\frac{2}{12} = 3\frac{5}{12}$ <p>Pupils should add fractions with different denominators and mixed numbers using the concept of equivalent fractions.</p>																																																										

Progression in written subtraction methods

Year 3	Year 4	Year 5	Year 6																														
<p>Subtract numbers with up to three digits, using formal written method of columnar subtraction</p> <p>Stage 1 - expanded with no exchange</p> $\begin{array}{r} 89 = 80 + 9 \\ - 57 \quad \underline{50 + 7} \\ 30 + 2 = 32 \end{array}$ <p>Stage 2 - expanded with exchange</p> <p style="text-align: center;"><i>Step 1</i></p> <p>The calculation should be read as e.g. 1 minus/take/subtract 6</p> $\begin{array}{r} 71 \quad 70 + 1 \\ - 46 \quad - 40 + 6 \end{array}$ <p><i>Step 2</i></p> $\begin{array}{r} 60 + 11 \\ - 40 + 6 \\ 20 + 5 = 25 \end{array}$ <p><i>when confident</i></p> <p><i>Step 3</i></p> $\begin{array}{r} 70 + 1 \\ - 40 + 6 \\ 20 + 5 = 25 \end{array}$ $\begin{array}{r} 754 \\ - 86 \end{array}$ <p><i>Step 1</i> $700 + 50 + 4$ $\quad \quad \quad - \quad \quad \quad 80 + 6$</p> <p><i>Step 2</i> $700 + 40 + 14$ (<i>adjust from T to U</i>) $\quad \quad \quad - \quad \quad \quad 80 + 6$</p> <p><i>Step 3</i> $600 + 140 + 14$ (<i>adjust from H to T</i>) $\quad \quad \quad - \quad \quad \quad 80 + 6$</p> <p><i>Step 4</i> $600 + 60 + 8 = 668$</p> $\begin{array}{r} 600 \quad 140 \\ 700 + 14 \\ - 80 + 6 \\ 600 + 60 + 8 = 668 \end{array}$	<p>Subtract numbers with up to 4 digits using the formal written methods of columnar subtraction where appropriate</p> $\begin{array}{r} 6141 \\ 754 \\ - 86 \\ \hline 668 \end{array}$ <table border="1" style="margin-left: auto; margin-right: auto; text-align: center;"> <tr><td></td><td>5</td><td>6⁵</td><td>12</td></tr> <tr><td>-</td><td>3</td><td>1</td><td>9</td></tr> <tr><td></td><td>2</td><td>4</td><td>3</td></tr> </table> <p>NOTE: In both examples, we have 'exchanged' one of the six tens for ten ones.</p> <p>Children will also begin to find the difference between two three-digit sums of money, with or without 'adjustment' from the pence to the pounds; know that decimal points should line up under each other</p> <p>£3.50- £1.67</p> $\begin{array}{r} 1.67 - 0.3 \\ \underline{\quad \quad} \\ 1.67 \\ - 0.30 \\ \hline \end{array}$		5	6 ⁵	12	-	3	1	9		2	4	3	<p>Subtract whole numbers with more than 4 digits, including using formal written method (columnar subtraction)</p> <p>Use compact ('decomposition') method and the vocabulary 'exchange'</p> <table border="1" style="margin-left: auto; margin-right: auto; text-align: center;"> <tr><td></td><td>8⁷</td><td>1⁶</td><td>.</td><td>3²</td><td>1⁰</td></tr> <tr><td>-</td><td>1</td><td>9</td><td>.</td><td>0</td><td>4</td></tr> <tr><td></td><td>6</td><td>7</td><td>.</td><td>2</td><td>6</td></tr> </table> <p>In this example, we have 'exchanged' one of the three tenths for ten hundredths</p>		8 ⁷	1 ⁶	.	3 ²	1 ⁰	-	1	9	.	0	4		6	7	.	2	6	<p>As per Year 5</p> <p>Subtract fractions with the same denominator within one whole</p> $\frac{6}{7} - \frac{1}{7} = \frac{5}{7}$
	5	6 ⁵	12

<p>Subtract fractions with the same denominator within one whole</p> $\frac{6}{7} - \frac{1}{7} = \frac{5}{7}$	<p>Subtract fractions with the same denominator</p> $\frac{1}{6} - \frac{4}{6} = \frac{3}{6}$	<p>Subtract fractions with the same denominator and multiples of the same number</p> $\frac{1}{4} - \frac{1}{8} = \frac{2}{8} - \frac{1}{8} = \frac{1}{8}$	<p>Subtract fractions with different denominators</p> $\frac{3}{4} - \frac{2}{3} = \frac{9}{12} - \frac{8}{12} = \frac{1}{12}$																														

Progression in written multiplication methods

Year 3

Write and calculate statements for \times and \div using tables they know, including for TU \times U using mental and progressing to formal written methods.

$$13 \times 4 = (10 \times 4) + (3 \times 4)$$

x	1	0	3		
4	4	0	1	2	= 5 2

$$13 \times 4 = (10 \times 4) + (3 \times 4)$$

$$| 40 + 12 = 52$$

Year 4

Multiply two-digit and three-digit numbers by a one-digit number using formal written

Multiply HTU \times U or HT \times U using grid method and vertical method alongside.

I.e 13×4

x	1	0	3		
4	4	0	1	2	= 5 2

$$\begin{array}{r} 13 \\ \times 4 \\ \hline 12 \\ 40 \\ \hline 52 \end{array}$$

4×3
 4×10

2	2	8	x	8		
8	1	6	0	0	1	6
					6	4
					1	6
					1	6
					1	8
					2	4

Leading to in Y5

HTU \times U

carrying above to avoid confusion with carrying below

$$\begin{array}{r} 12 \\ \times 6 \\ \hline 1338 \end{array}$$

Year 5

Multiply numbers up to 4 digits by a one or two-digit number using a formal method, including long multiplication for two-digit numbers

x	2	0	3		
1	0	2	0	0	3
5	1	0	0	1	5
					3
					4
					5

$$\begin{array}{r} 23 \\ \times 15 \\ \hline +15 \quad (5 \times 3) \\ 100 \quad (5 \times 20) \\ 30 \quad (10 \times 3) \\ 200 \quad (10 \times 20) \\ \hline 345 \end{array}$$

- Multiply proper fractions & mixed numbers by whole numbers,

$$\frac{1}{4} \times 5 = 1 \frac{1}{4}$$

Year 6

Building on written methods in y5 children will become confident in using the formal written method for multiplication

1	2	3
X		6
7	3	8

1	2	3	0
x	1	6	
7	3	8	
1	2	3	0
1	9	6	8

- Multiply simple pairs of proper fractions, writing the answer in its simplest form [for example $\frac{1}{4} \times \frac{1}{2} = \frac{1}{8}$]

Progression in written methods for division

Year 3

1) Solve division through repeated addition or subtraction that involves remainders, e.g. $10 \div 3 = 3 \text{ r}1$

Moving onto (when the dividend is more than ten times the divisor):

Year 4

Then onto the vertical method:

Supported by the number line method initially

$$\begin{array}{r} 3 \overline{) 72} \\ - 30 \\ \hline 42 \\ - 30 \\ \hline 12 \\ - 12 \\ \hline 0 \end{array} \quad \begin{array}{l} 3 \times 10 \\ 3 \times 10 \\ 3 \times 4 \\ 24 \end{array}$$

Year 5

Using rods/counters on laminated grids to support long division by chunking initially $972 \div 36$

$$\begin{array}{r} 36 \overline{) 972} \\ \underline{720} \\ 252 \\ \underline{180} \\ 72 \\ \underline{72} \\ 0 \end{array} \quad \begin{array}{l} 20 \times 36 \\ 5 \times 36 \\ 2 \times 36 \\ 27 \text{ answer} \end{array}$$

Supported by the use of a "shopping list"

360	(36 x 10)
720	(36 x 20)
1080	(36 x 30)

Year 6

Divide numbers up to four-digit by two-digit number using the short ('bus stop') method

$3018 \div 8$

0	7	6	2
8	6	60	49
			16

0	3	7	7	.	2	5
8	3	30	61	58	.	20
						40

or $377 \text{ r} 2$ or $377 \frac{2}{8}$

Extended to decimals:

0	2	4	7	.	7	9
5	1	12	23	38	.	39
						45

$$\begin{array}{r} 343 \\ 18 \overline{) 6174} \\ \underline{54} \\ 77 \\ \underline{72} \\ 54 \\ \underline{54} \\ 0 \end{array}$$

Long division for 2 digit numbers

Divide a fraction by a whole number $3/4 \div 5 = 3/20$
